# NEBO® 250+ LUMEN DUO HEADLAMP

The NEBO® DUO Headlamp is an all-powerful, hands-free lighting solution. The push button on/off button allows you to easily cycle through the FOUR light modes: one white LED (250 Lumens), 2 C·O·B strips (80 Lumens) or 2 RED C·O·B strips in steady or beacon mode. The red LED is a low-signature light, which ensures stealth in the dark, enhances night vision and makes reading in little to no light possible. Its signature 2 strip C·O·B design fully illuminates your immediate area with its wide flood beam. The DUO Headlamp is tough, reliable, lightweight and completely shock-proof.

### 4 LIGHT MODES

- Spot Light (250 lumens) - 3.5 hours / 122 meters
- C·O·B Flood Light (80 lumens) - 7 hours / 13 meters

# LIGHTING 101

## GAUGING LED PERFORMANCE

Measuring the brightness of light is not a very straight-forward task. Currently, the most common measure of brightness is the lumen rating. Lumens replaced the old wattage-rating system because modern lights consume far less power and are much brighter.

A single lumen is the measure of energy that's released from a light. Imagine putting a transparent bubble around a light bulb and being able to measure all of the energy that flows through the bubble — this is how lumens are measured.

At NEBO®, we don't live in a bubble and we know that as lighting technology advances, so must the tools used to gauge

the performance. Thus, many of our flashlights are now gauged by lux instead of lumens. Lux isn't a measurement of the amount of energy released — it's a measure of how much light is actually hitting your target.

We've recently introduced flashlights that have advanced optics designed to maximize energy efficiency by tightly focusing the beam of light. So you can light up the mystery across the field without wasting energy by lighting the ground at your feet.

At NEBO® we make flashlights that are designed to meet real-life applications and we use advanced engineering to create lighting products that conserve energy yet blast a powerful beam of light.

## MEASURING POWER:

### WATT

measures power consumption

### LUMEN

measures power exertion

## MEASURING BRIGHTNESS:

### LUX

measures the amount of light hitting the target.

### OPTICS

act like a turbo-charger to help maximize beam brightness.

## RATING PERFORMANCE BY PRODUCT TYPE:

### LANTERNS & WORK LIGHTS

These lighting products are designed to illuminate the area around — just like a household light bulb. Since light bulbs are rated in lumens, lantern output is rated using lumens.

### CLASSIC FLASHLIGHTS

Classic flashlights illuminate the area directly in front of us — mimicking a light-post fixture, so it's appropriate to also rate these products using lumens.

### LONG-RANGE FLASHLIGHTS

These flashlights feature specialized optics with zoom capabilities that are designed to project an intense beam of light at a distance. Lumen ratings ignore the use of specialized optics and fail to provide a clear representation of beam distance or brightness. Lux on the other hand, measures the amount of light actually hitting the target.

## TECHNOLOGY:

Eliminating inconsistencies in light, the OC™ (Optimized Clarity) Technology provides intense, clear, pristine light that is easy on the eyes. This technology allows the light beam to be as bright on the edge as it is in the center when used in flood mode.

A new innovation in LED technology. C·O·B (Chip On Board) features smaller, easier clustered LED chips that are mounted directly to the circuit board. These LED chips work together as one lighting module. Because of the compact design, C·O·B outperforms traditional lighting by up to 50 times the light output per centimeter of light surface.

ARCUS is a new proprietary C·O·B LED technology that shapes light like never before with 250° of intense light coverage for maximum safety.
